EUCO Diamond Hard

Liquid Densifier & Sealer for Concrete

Product Description:

EUCO Diamond Hard is a liquid densifier and sealer for concrete developed by Euclid Chemical. The product penetrates, chemically reacts and bonds within the surface to produce a harder, dust-proof and liquid repellent surface.

The silicate and silicate compound blend contained in EUCO Diamond Hard plays a unique role in both densifying and sealing the concrete for added strength and durability.

Concrete treated with EUCO Diamond Hard develops a subtle sheen that will improve in appearance as traffic and regular maintenance work to buff in a deeper shine over the years.

A EUCO Diamond Hard treated floor can be opened to foot traffic in as little as 4 hours. One day after application the floor is fully functional and can be returned to service.

For more information visit www.flowcreteaustralia.com.au

Product Benefits:

-  Easy and quick to apply — densifies and seals in one step
-  Reduces porosity and increases density of the concrete surface
-  Resists penetration of liquids, including oil and grease
-  Provides a low sheen lustre, visually enhancing the concrete surface
-  Will not blush, peel, flake or wear away
-  Minimises rubber tyre marks and makes them easy to remove

Application Suitability:

- Warehousing facilities
- Distribution centres
- Manufacturing plants
- Retail outlets & supermarkets

The Science Behind EUCO Diamond Hard

<p>1 CSH GEL</p>  <p>The silicate in EUCO Diamond Hard reacts to form extremely hard crystals in the pores of concrete surfaces.</p>	<p>2 SILICONATE</p>  <p>The silicate in EUCO Diamond Hard also reacts to create a liquid-repellent seal on the concrete surface.</p>	<p>3 CSH GEL & SILICONATE BLEND</p>  <p>The synergistic activity of the silicate & silicate blend in EUCO Diamond Hard provides both a strengthened and sealed concrete surface.</p>
